and Register Today!**

For General Questions Please Contact Our Office
(402) 316-5460 or support@dvauction.com

Bidding is available through DV Auction. It is recommended to register in advance for prior approval and a bidding number at (402) 316-5460 or support@dvauction.com

*****2021 WBIA ANNUAL SALE WILL BE INTERNET BIDS OR PHONE BIDS ONLY*****

Due to continued Covid-19 restrictions, no bidders will be allowed on-site sale day.

WBIA thanks you in advance for your cooperation

Viewing of bulls in the pens at the test station through April 2 is encouraged! Pens are outside and accessible at your convenience. Take notes as pens will not be accessible April 3. Individual bull videos are online at DVAuction.com and wisconsinbeef.com. Enter pens at your own risk. Sale day supplement sheets will be available on our DV Auction site the morning of the sale.

Internet bidding through DVAuction is encouraged. **Bidders must be approved and create an account by April 2. This can be done online at DVAuction.com or by phone at 402-316-5460.**

DV is Click to bid or proxy bid ONLY and requires a good internet connection. Auction April 3 will be carried live online at DVAuction.com starting at 11am. A bidding tutorial is available at DVAuction.com.

Phone bids will be accepted during the sale. **Bidders must contact WBIA at 800-297-5747 to get a buyer number and discuss lot numbers.** Leave contact information on the answering machine through April 2, or call April 3 before 9:00 am. WBIA representatives will call back to confirm orders and/or deliver your bid by phone during the auction. Purchases may be picked up immediately following the close of the auction. We will **NOT** be loading out any bulls on Easter Sunday April 4th. Bulls can be picked up weekdays from 8am-4pm or weekends by appointment. Please call 608-342-1850 or 608-342-1119 to schedule pick up. Settlement required before release of any bull.

SALE ORDER: Bulls will be sold by pen in the following order.

General Information: Terms and Conditions

Terms: Terms of the sale are cash. Each bull will be sold to the highest bidder. The Auctioneer will settle any dispute as to bids. Bulls must be paid for by the buyer before being released. Each bull will be at the buyer's risk as soon as sold, but will be cared for by the management for a reasonable time until he is loaded.

Registration: Certificates will be transferred to the buyer at the seller's expense.

Guarantee: WBIA will guarantee the libido of sale bulls according to the following provisions. Bulls will be guaranteed breeders by WBIA from sale day until August 1, approximately 110 days, provided the bull(s) have been properly managed & are in good health as diagnosed by a licensed veterinarian. The first \$1500 of the purchase price will be considered the salvage value of any sale bull & will not be reimbursed by WBIA. WBIA will cover the sale price of any non-breeder, as determined by the pregnancy status of exposed cows; up to \$3700 **provided** a replacement bull is purchased from any current WBIA member. Reimbursement formula used will be, Purchase Price minus Salvage Value (\$1500) for a total possible maximum reimbursement of \$2200. The money from this guarantee will be paid directly to the seller of the replacement bull, at the direction & consent of the buyer & the seller, & will be used to offset the purchase price of the replacement bull. Replacement bull price will be negotiated between buyer & seller. Replacement bull costs exceeding the WBIA guarantee will be paid by the buyer directly to the seller. If desired, the buyer may apply any reimbursement value toward the purchase of any bull at the next WBIA Annual Bull Sale. In this event, the reimbursement would be in the form of a credit to offset the auction price. WBIA Executive Director John Freitag &/or any Board member(s) must be notified **FIRST** to start the replacement process. Unforeseen conditions will be addressed by & decided by WBIA Board action. Failure to breed due to injury or exhaustion is not covered. This guarantee is not an insurance policy. Insurance is available sale day at buyers' expense. A list of WBIA members is available from John Freitag.

Health: Bulls will be tested for TB, Bangs & Anaplasmosis only if required. Interstate health papers will be furnished on sale day. WBIA does not warrant bulls to be free of Johnes'. Any warrant is between buyer and seller.

Bids: Sealed bids may be sent to the Auctioneer, Ring men, Station Management, or any member of the WBIA Board of Directors. Sealed bids will be handled with strictest confidence. Sale day phone bids will be accepted at 1-800-297-5747. Bidding is available through DV Auction. **It is required to register in advance for prior approval and a bidding number at (402) 316-5460 or support@dvauction.com**

Announcements: Auction box announcements will take precedence over the printed materials in this catalog.

Obligation: It shall be expressly understood that all persons who attend this sale do so at their own risk. The Wisconsin Beef Improvement Association & the University of Wisconsin & its employees assume no liability, legal or otherwise, for accidents which may occur, & the terms of the sale shall constitute a contract between Buyer & Seller.

Requirements: The minimum requirements for entry into the test are 2.5 pounds weight per day of age. Bulls, which fail to meet the minimum requirements for scrotal circumference & breeding soundness as established by the Society of Theriogenology, have been eliminated from the sale. Structural soundness has not been evaluated because of wide differences in opinion as to what is soundness or unsoundness & will be left to the Buyer.

Ration: All bulls were fed a total mixed ration balanced with dry hay, corn silage, cracked corn, dried distillers grain and a balancer mix, ad libitum, twice a day.

General Considerations: Performance testing bulls in a central test station does not improve the bulls being tested. Its purpose is to aid in identifying bulls which are superior in growth performance. Even under the best possible conditions at a central test station, not all pre-test environmental effects can be eliminated. Therefore, small differences in measurements are not very meaningful. The only reasonable assumption is to assume that all bulls had an equal opportunity.

Sale Order: Bulls will be sold in a pre-established order by pen (listed earlier on page 3).

Post Sale: Bulls may stay at the test station for up to **20 days after the sale for a nominal charge of \$5.00/day. After 20 days, the price goes to \$25/day.** Please indicate your intentions when you pay for your bull. During this time bulls will be fed a maintenance ration and UW-Platteville Pioneer Farm is not liable for your bulls. To schedule pick up, please contact Pioneer Farm at 608-342-1850 or 608-342-1119. Pick up is available M-F 8 – 4 pm or by appointment.

All bulls have been DNA tested to further enhance and improve the accuracy of their individual EPDs and to guarantee parentage. Please visit the website of each breed to review their genomic guidelines and information it provides.

ANNUAL MEETING

The WBIA Board of Directors will be hosting their annual meeting during the **summer months**.

Please look for our notice and plan on attending.

Management of Yearling Bulls

Pre-breeding Management

- Provide access to dirt lots of 1 to 2 acres in size to allow for ample exercise prior to the breeding season. This is **IMPERATIVE**. Bulls that are physically fit will have a higher degree of sexual drive and will remain sound.
- Allow bull to adjust to new environment for 60 days prior to breeding season.
- To keep the bulls in good condition, a ration which contains 11-12% crude protein and 70% TDN from medium quality hay along with some grain supplementation, should be provided.

Breeding Season Management

- DO NOT OVERUSE A YOUNG BULL DURING HIS FIRST BREEDING SEASON. "Rule-of-thumb" for the proper bull to female ratio is 1 cow per month of age of the bull up to 3 years of age. For example, a 15-month old bull could be run with 15 females. A mature 3-year old bull (36 months of age) should be allotted a maximum 36 females.

Age of Bull	Number of Females Exposed
12-15	10-12
15-18	12-18
18-24	18-25
24 mo. & older	25-40

- The young bull is still growing, and therefore may need to be provided some extra feed during the breeding season. Monitor the bull's body condition: if the bull is starting to lose condition, increase the amount of feed provided. Do not over condition.
- Observe the bull closely during the breeding season to ensure the bull is servicing the females, ideally observing the cows once to twice daily. Record the initial service date. If the female was not bred, she should begin cycling 15 - 25 days from that initial service date. It is important to monitor bulls for normal breeding behavior and to catch an injury early to prevent missed breeding opportunities.

Post-Breeding Management

- Evaluate the bulls' condition and, if needed, feed and manage them in such a way that they will be in moderate condition, a body condition score of 6 at the beginning of the next breeding season.

-Remember-

Bulls Are Guaranteed By The Breeder To Be Breeders If **Well Managed**. It is also strongly encouraged that bulls be allowed ample exercise on dirt lots **PRIOR** to the beginning of breeding season.

FOR SAFETY REASON ALL BULLS WILL ONLY BE LOADED UPON COMPLETION OF THE SALE!

No bulls will be loaded on Easter Sunday April 4th.

WBIA has transitioned away from a power index and is now marketing bulls that are balanced not only in and performance but also EPDS and structure, putting more emphasis on the total package. Our consultant has viewed the bulls multiple times through the testing period for phenotype and structural considerations. To qualify for the sale, bulls were required to meet a 3.4 lb ADG over the 100 day feeding period. The board of directors and consultant then analyzed the bulls for structural concerns and made the final selection.

As part of the mission of the WI Beef Improvement Association, we have attached the definitions for the EPDs reported in the catalog for the breeds, based on the board of director's recommendations. Those definitions are as follows.

Glossary of EPD's

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Please note, we are not reporting the accuracy of the EPD but are reporting the percent within the breed that the individual's EPDs fall. E.G. If the percent is listed as 30, then the individual's EPDs are in the top 30% of the breed for that trait or is better than 70% of the breed. If the percent is listed as 70, then the individual's EPDs are in the top 70% of the breed for that trait or is better than 30% of the breed.

PRODUCTION

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

MATERNAL

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Maternal Weaning Weight (MWW), Pounds of weaning weight due to milk and growth.

Maternal Calving Ease (MCE), Percent of unassisted births in first-calving daughters.

Stayability (Stay), Predicts the probability of a bull's daughters remaining productive until at least 6 years of age since that's how long it takes a female to breakeven given all the expenses of development.

CARCASS

Ribeye Area (REA), REA EPDs reflect differences in an adjusted 365-day ribeye area measures based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better muscled & higher percentage yielding slaughter progeny than will sires with lower REA EPDs.

Marbling (MB), Predicts differences for carcass marbling score as expressed in marbling score units. Higher values are positively correlated with higher carcass quality grades.

\$VALUE INDEXES

\$Value indexes are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

Grid Value (\$G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

MULTI TRAIT INDEX

All-Purpose Index (API), Dollars per cow exposed under an all-purpose-sire scenario. Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Herdbuilder (HB), for the selection of bulls to develop profitable replacement females and maximize the value of non-replacement marketed progeny. Includes influence from stayability, heifer pregnancy and calving ease. With impact from marbling, yield grade and growth epds.

Gridmaster (GM), to meet the primary goal of maximizing profitability of feeders in the feedyard and on the rail. Index is influenced by marbling, yield grade and growth epds.

A maternal brother to the 2nd high selling bull in last year's WBIA sale, 054 is one of the best Angus bulls we've raised. This easy going stud is sired by Stunner, the rare and popular GENEX bull, but the best part might be his dam. His dam has had four calves born on 1/30, 2/1, 2/7 and 12/23. That's an average calving interval of 353 days- all first service AI with no estrus synchronization! If you want efficient, highly fertile and good looking cows, check out this bull.

Big time pedigree and EPDs! Sired by the complete outcross Thomas Jefferson, and out of a young Domain daughter, this stud puts together a cool pedigree and outstanding genetic merit. From calving ease to carcass, H030 excels across the board! As of this writing, H030 is one of only 11 bulls in the entire breed with his combination of ProS, HB and GM genetic indexes! Should be a nice bull for breeding virgin heifers.

Nigh Red Domain 79-1H is an attractive, well-balanced bull with abundant capacity, thickness, muscle, and marbling. His deep dark red color, easy-going temperament and low birth weight EPD are just added bonuses. He has a marvelous pedigree, being the son of 3SCC DOMAIN A163 - the No. 1 sire for registrations in 2020 who is taking the Red Angus breed by storm and leaving fabulous offspring.

This bull is similarly bred to the Lot 47 bull. He is a meat wagon! Moderately made, thick and soggy middled. If you're looking to add extra growth in one year, here's your chance. Sire is in the top 10% for WW, top 20% for YW and top 25% for RE. Dam goes back to the Ray Johnson program from Brodhead, who tested bulls here for MANY years! Not recommended for heifers.

A great addition to your herd, loaded with maternal traits, muscle, and marbling. His daughters will be moderate, easy fleshing, with good feet and udders. Sons will be thick and masculine with good dispositions. This bull's EPD's have undergone GGP-LD genomic EPD enhancement. He has a quiet disposition with a low BW EPD. He has an outstanding outcross pedigree as the son of 3SCC DOMAIN A163 who is taking the Red Angus bred by storm as the number one sire for registrations in 2020.

Each year I pick out a sleeper who I think has all the right pieces but just needs the opportunity to prove himself. Sometimes they never wake up, but not this guy! He has blossomed into an attractive profiling individual with a lot of quality. Lots of eye appeal in this one. His dam has been a no miss for producing high quality, three dimensional sons and daughters. A half brother to #72, sired by Nexus who excels in growth and overall carcass.
